---

None of our surfaces is a "normal" one like it finds use on daily life objects. We formally want to express, that it is your duty to take care of your personal WEDENSTEIN product in a proper way in order to ensure a long and satisfying life cycle.

Nano-sealed surfaces require a lot of expertise in manufacturing **and** maintaining. They are used for fine structures and when a layer of clear coat wouldn't be appropriate or satisfying.

Please avoid direct contact with hard materials, rubbing or shocking the surface. This could partially damage the sealing and expose the commodity to humidity, oxygen and dirt, which will lead to damages.

Please avoid contact with aggressive or abrasive chemicals. A nano-sealing protects the surface by building an ultra-thin guard. By using chemicals or abrasives, you will most likely open it and increase the chance of damaging the surface irreversibly.

Please remove rests of sweat, food and beverages immediately. They often contain organic or anorganic acidities, which can affect the surface, leave marks or stains.

Please do not add masking tape or any other sticky product to the surface. Tapes and foils mostly bring in tension in the surface, which will be followed by visible irregularities or damages in the nano-coating.

For cleaning, please use only clean wet micro-fibre rags and – when necessary – mild soap or mild stretched glass cleaner. Rubbing too heavy or scraping with finger nails will cause scratches and marks. Inappropriate polishing will leave shiny marks.

Do always handle parts with a nano-sealing at tight room temperature range. Heat will soften the sealing, which can lead to damages.

Please avoid direct sunlight or other UV radiation.

When covering / protecting the surface, make sure you use a proper type of textile and avoid too much weight or pressure. This can cause scratches, marks and irregularities.

We recommend to re-seal the surface from time to time with a proper wax-polish. If you are not sure, feel free to ask a WEDENSTEIN professional. We'll be there for you.

# WEDENSTEIN

is a conglomerate of artists, engineers, craftsmen and visionaries.

We combine the assets of traditional craftsmanship and state of the art technology.

WE LOVE WHAT WE DO.
