None of our surfaces is a "normal" one like it finds use on daily life objects. We formally want to express, that it is your duty to take care of your personal WEDENSTEIN product in a proper way in order to ensure a long and satisfying life cycle.

Satin surfaces require a lot of expertise in manufacturing **and** maintaining.

Please avoid direct contact with hard materials, rubbing or shocking the surface. Scratches, marks and partial stains of gloss will appear.

Please avoid contact with aggressive or abrasive chemicals. The gloss level is most-likely to be changed irreversibly. Additionally you could destroy the haptics.

Please remove rests of sweat, food and beverages immediately. They often contain organic or anorganic acidities, which can affect the surface, leave marks or stains.

Please do not add masking tape or any other sticky product to the surface. Tapes and foils mostly bring in tension in the surface, which will be followed by visible irregularities or damages in the top-layers.

For cleaning, please use only clean wet micro-fibre rags and – when necessary – mild soap or mild stretched glass cleaner. Rubbing too heavy or scraping with finger nails will cause scratches and stains. Inappropriate polishing can change the gloss-level and resistance.

Please avoid direct sunlight or other UV radiation.

Don't try to polish or sand the surface in order to get rid of scratches or marks. It would change the gloss-level and change optical and haptical characteristics.

When covering / protecting the surface, make sure you use a proper type of textile and avoid too much weight or pressure. This can cause scratches, marks and irregularities.

We recommend to clean satin-matte and satin-glossy surfaces only when it is really necessary. Every physical impact will slightly change the characteristics over time.

If you are not sure, feel free to ask a WEDENSTEIN professional. We'll be there for you.

WEDENSTEIN

is a conglomerate of artists, engineers, craftsmen and visionaries.

We combine the assets of traditional craftsmanship and state of the art technology.

WE LOVE WHAT WE DO.
